- Clean up the mobile view, iPod is breaking in the mobile view
- Style other pages, right now it is just raw text dump
- Add more colors, I recommend pulling from the iPod Nano 4th gen colors, since those ipods had every single primary color
- Add more to the iPod navigation, make an active D-Pad to control the iPod menu and perhaps include a functionality that allows the fast forward button to take you to the next page or the menu button take you to the landing page.
- Change out the iPod photo you use for the navigation, perhaps use vector art so it is not as fuzzy.
